

BUBBLE PLAY

Suits ages 22 months to 60 months

What you'll need

1 litre of warm/hot water
250ml washing up liquid
2-4 tablespoons of glycerin
Straws
String

What you do

1. To make the bubble recipe, mix all of the liquid ingredients carefully and slowly so not to make bubbles during the process
2. Leave the mixture for at least 1 hour
3. Make bubble wands by attaching two straws together with a piece of string at either end. Makes lots of different shapes and sizes.
4. Let the children dip the wands into the mixture, running around letting the wind make the bubbles.

This activity is perfect for developing social skills as the children collaborate. It enables children to develop safety awareness as you explain that bubbles are not for eating and that it may hurt their eyes if the mixture gets in them. It also develops children's understanding of technology and understanding of how things work. Children are able to make different shapes and by making the mixture with the adult, they can develop their measuring skills (supporting mathematics further).
